

COMPACT PALLETISER

Compact Palletiser is the range of new compact and modular palletizers introduced by Robopac. We manufacture the most flexible, safest and easiest to use palletizer available.

This palletisers are mission-critical components of automated end-of-line packaging operations for food and consumer packaged goods manufacturers. Our technologies make palletizing reliable, easy, safe, and energy efficient.

Palletiser model groups share common functional modules and frame systems to provide comprehensive palletizer solutions.

Shared modules maximize layout flexibility while reducing cost through increased manufacturing and machine controls efficiencies.

Modular engineering means quality control and complete flexibility in the configuration of machine components.

The controls architecture is based on "Full B&R".

Operations interface is provided by a userfriendly touchscreen panel (10,1").

PROCESSED PRODUCTS:

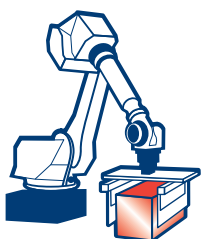

WRAP-AROUND
CARTON
